ACKNOWLEDGMENTS

The Maryland Department of Natural Resources would like to express sincere appreciation to the many scientists and naturalists who willingly share information and provide their expertise to further our mission of conserving Maryland's natural heritage.

Publication of this list is made possible by taxpayer donations to Maryland's Chesapeake Bay and Endangered Species Fund.

03-1272016-633.

INTRODUCTION

The following list comprises 514 native Maryland animals that are among the least understood, the rarest, and the most in need of conservation efforts. It includes species occurring in Maryland that are on the federal list of Endangered and Threatened Wildlife and Plants under the Endangered Species Act (ESA), species currently on the State's Threatened and Endangered Species list, and additional species that are considered rare or under assessment by the Wildlife and Heritage Service. The purpose of this list is to inform the public of rare species, to provide an indication of their degree of rarity, to solicit additional information on the status and distribution of these species, and to promote an interest in their conservation. For more information about Maryland's wildlife, habitats, and their conservation, see the 2015 Maryland State Wildlife Action Plan, available at: dnr.maryland.gov/wildlife/Pages/plants_wildlife/SWAP_home.aspx

Compiled by Wildlife and Heritage Service staff and conservation partners, this list of rare species is a result of more than 35 years of effort to gather, research, and analyze data from numerous sources, such as museums, scientific literature, unpublished documents, reports from zoologists and amateur naturalists, and extensive field work conducted by scientists from the Department of Natural Resources (DNR). Our knowledge of Maryland's fauna has grown steadily. Field surveys and studies conducted by Wildlife and Heritage Service biologists and cooperators have led to the rediscovery of species previously thought to be extirpated from the state, as well as the discovery of species previously unrecorded in Maryland, including some species new to science. Similarly, some species are now known to be either rarer or more common than were previously believed. Collectively, these efforts have contributed to a better understanding of the status, distribution, abundance, ecology, and conservation needs of the state's fauna. Thus, this list and the conservation rank and legal status of each species are periodically revised to keep pace with new information. The list was first published in 1984, and its last revision was in 2010.

The primary Maryland law (enacted in 1975) that governs the legal listing of threatened and endangered species is the Nongame and Endangered Species Conservation Act (Annotated Code of Maryland 10-2A-01). The Act is supported by regulations (Code of Maryland Regulations, COMAR 08.03.08) that define listing criteria for endangered, threatened, in need of conservation, and endangered extirpated species; lists the species included in each category; establishes the purpose and intent of research and collection permits; and lists prohibited activities. Maryland regulations may be found online at: dsd.state.md.us/COMAR/ComarHome.html

The Wildlife and Heritage Service (the Service) within DNR is the lead state agency responsible for the identification, ranking, protection, and management of rare and endangered species and natural communities in Maryland. The Service seeks to identify and sustain populations of rare plants and animals through the maintenance of healthy natural ecosystems. The Service maintains a database of natural areas and occurrences of rare, threatened, and endangered plant and animal species. This database is aligned with the NatureServe network, an international association of over 80 programs that tracks and monitors species and plant communities using identical methodologies across all 50 states, Canada, and Latin America. Wildlife and Heritage Service biologists are concerned with many more species than those included on Maryland's Threatened and Endangered Species list. Some of these species are potential candidates for listing and usually require further investigation into their conservation status. Others are thought to be secure at present but are worthy of attention because of limited distributions, declining populations, or other ecological vulnerabilities.

The Maryland Department of Natural Resources Fisheries Service maintains an official list of game and commercial fish species that are legally designated as endangered, threatened, or in need of conservation in Maryland. The list of Endangered and Threatened Fish Species (COMAR 08.02.12) can be obtained by contacting the Fisheries Service, Department of Natural Resources, Tawes State Office Building, Annapolis, MD 21401 or by visiting their website at: dnr.maryland.gov/fisheries/Pages/endangered.aspx.

GUIDE TO THE LIST

This list of rare, threatened, and endangered animal species is arranged phylogenetically, with invertebrate groups listed before vertebrate groups. Within each group, species are listed alphabetically by scientific name. Space limitations preclude inclusion of the scientific authors' names for the taxa in this list. Some invertebrate groups are not fully represented or are entirely absent from this list. Available information has been compiled for only certain species or groups of invertebrates. Many invertebrate species are not well known and have not been sufficiently researched or surveyed in Maryland.

Birds and other migratory species are primarily of conservation concern to the Service on the basis of their breeding status. For example, Dark-eyed Juncos breed in only a few remote areas in western Maryland during the summer, but are abundant backyard birds during the winter. To be included on the official State Threatened and Endangered

Species List, migrants that are rare Maryland breeders must also be rare during the non-breeding season. Thus, the Dark-eyed Junco cannot be legally listed as Endangered, Threatened, or In Need of Conservation under current listing criteria. However, some birds, such as the Red Knot, and other migratory species, such as whales and sea turtles, have been included because of their federal legal status even though they typically do not breed in Maryland.

Each page of the following list includes six columns, titled (from left to right) Scientific Name, Common Name, Global Rank (G rank), State Rank (S rank), State Status, and Federal Status.

At the end of the list is a series of four Appendices:

Appendix I details the changes to species' state ranks and statuses since the last publication of the list in April 2010.

Appendix II contains a list of species with unusual, non-standard ranks and has been provided to clarify their current conservation status in Maryland.

Appendix III contains a partial list of synonym names, which is meant to be used as a cross reference for scientific names that taxonomists have updated. The names used in this publication might not reflect the most recently published taxonomic changes or standards.

Appendix IV includes species currently under review for changes to their conservation status rank and/or legal status.

UNDERSTANDING CONSERVATION STATUS RANK AND LEGAL STATUS

Conservation status ranks are intended to indicate risk of elimination or extinction in the foreseeable future and are arranged along a simple numerical scale (1-5) with the lower numbers reflecting increasing rarity and risk. Conservation status ranks also present geographic information about rarity and risk. Subnational or state ranks (S ranks) represent the vulnerability of the species in the state; whereas global ranks (G ranks) represent the imperilment of the species throughout its range (although most species are far from being globally distributed). The status rank of a species is determined through analyses of a number of factors within the pertinent jurisdiction, primarily population number, size, viability, threats, and both short-term and long-term trends. The final metric, a combination of the numeric index (1-5) and the geographic identifier (G or S), distills this large amount of information into a single value. Thus, for a particular species that has a global rank of G1 and a state rank of S1, the species is not only rare and at risk of elimination from within Maryland but also rare throughout its entire range and at risk of extinction. Similarly, an animal with ranks of G5 and S5 indicate that the species is demonstrably secure in Maryland and throughout the species' global range as well.

Most species have single-valued conservation ranks; however, some variations are possible. Range ranks, e.g., G1G2 or S1S3, indicate the (usually narrow) range of uncertainty in the rank. For example, a species may have more populations than is typical of the lower rank, but few are protected; this may affect the viability of the population(s). A taxon (T) rank follows the global (G) rank of the full species as a qualifier to indicate the conservation status of the subspecies, e.g., G5T3. The latter indicates that the subspecies is much rarer or at risk than the full species. A global rank may also be followed by a 'Q'-qualifier to indicate that there are prevailing taxonomic questions for that species (e.g., G4Q). A '?'-qualifier may be used to indicate that there is a level of uncertainty in the global or state rank (e.g., G4? or S2?). For migratory species, state (S) ranks may include a qualifier indicating the numeric value is relevant to its breeding (B) status, non-breeding (N) status, or migrant (M) status within Maryland.

Definitions of conservation status ranks and rank qualifiers are presented in Table 1. State ranks for many species are modified as needed to reflect current information. All member programs of the NatureServe Network of Natural Heritage Programs and Conservation Data Centers across the Western Hemisphere use the same ranking system and format. Global ranks are maintained by NatureServe, while the various member programs maintain the subnational or state ranks. This allows direct conservation status comparisons across the political and geographic landscape, and it is one of the most powerful aspects of the Network.

Table 1. Definitions of Global (G) and State (S) Conservation Status Ranks and Rank Qualifiers.

Rank	Definitions of Global / State Ranks
GX or SX	Presumed Extirpated — Species believed to be extirpated from the jurisdiction (i.e. global, or state/province). Not located despite intensive searches of historical sites and other appropriate habitat, and virtually no likelihood that it will be rediscovered.
GH or SH	Historical (Possibly Extirpated) — Known only from historical records and some hope of rediscovery remains. There is some evidence that the species may no longer be present, but not

	enough to know this with certainty.
G1 or S1	Critically Imperiled / Highly State Rare — At very high risk of extinction or extirpation due to very restricted range, very few populations or occurrences, very steep declines, very severe threats, or other factors. Typically occurring in five or fewer populations.
G2 or S2	Imperiled / State Rare — At high risk of extinction or extirpation due to restricted range, few populations or occurrences, steep declines, severe threats, or other factors. Typically occurring in 6-20 populations.
G3 or S3	Vulnerable / Watchlist — At moderate risk of extinction or extirpation due to a fairly restricted range, relatively few populations or occurrences, recent and widespread declines, threats, or other factors. Typically occurring in 21-80 populations.
G4 or S4	Apparently Secure — At fairly low risk of extinction or extirpation due to an extensive range and/or many populations or occurrences, but with possible cause for some concern as a result of local recent declines, threats, or other factors.
G5 or S5	Demonstrably Secure — At very low risk of extinction or extirpation due to a very extensive range, abundant populations or occurrences, and little to no concern from declines or threats.
S3.1	Vulnerable and Globally Rare — Species is actively tracked by the Service because of the global significance of Maryland occurrences. Although not currently threatened or endangered, Maryland occurrences may be critical to the long-term security of the species.
SU	Status Uncertain — A numerical rank cannot be established with confidence for reasons including lack of historical records, low survey effort, cryptic nature of the species, or concerns that the species may not be native to the state. Uncertainty spans a range of more than three ranks as defined above.
GNR or SNR	Not Ranked — Species has not yet been ranked.
Qualifier	Definitions of Rank Qualifiers
B	Breeding Rank — Indicates the species is a migrant and the rank applies to the status of the breeding population in Maryland.
M	Migrant Rank — Indicates the species is a migrant and the rank applies to the status of the transitional population in Maryland.
N	Non-breeding Rank — Indicates the species is a migrant and the rank applies to the status of the non-breeding population in Maryland. This may include individuals outside the typical breeding season, wintering individuals, or summering non-breeding individuals.
Q	Questionable Taxonomy — Indicates that the taxon has questionable, controversial, or uncertain taxonomic standing, e.g., treated by some authors as a species, whereas others treat it as a subspecies or not at all.
T	Taxon Rank — Indicates that the infraspecific taxon (subspecies) is ranked independently from the typical species.
?	Rank Uncertainty — Indicates uncertainty in the numeric value that may span 2-3 ranks, as defined above.

Legal status presents a simple hierarchy of endangerment in four categories: Endangered (E), Threatened (T), In Need of Conservation (I), and Endangered Extirpated (X). Definitions of legal statuses are presented in Table 2. Legal protection statuses of species are typically reviewed and updated, if needed, every two to three years. All species listed as threatened or endangered at the federal level also have a legal status within Maryland.

Table 2. Definitions of State and Federal Legal Protection Status.

State Status	Definitions
Endangered (E)	A species whose continued existence as a viable component of Maryland's fauna is determined to be in jeopardy.
Threatened (T)	A species that appears likely, within the foreseeable future, to become endangered in Maryland.
In Need of Conservation (I)	An animal species whose population is limited or declining in Maryland such that it may become threatened in the foreseeable future if current trends or conditions persist.
Endangered Extirpated (X)	A species that was once a viable component of the fauna of Maryland, but for which no naturally occurring populations are known to exist.
(State Status)*	A qualifier denoting the species is listed in a limited geographical area only.
Federal Status	Definitions
Endangered (LE)	Taxa listed as Endangered under the federal ESA; in danger of extinction throughout all or a significant portion of its range.
Threatened (LT)	Taxa listed as Threatened under the federal ESA; likely to become endangered within the foreseeable future throughout all or a significant portion of its range.

ADDITIONAL RESOURCES AND IMPORTANT LINKS

National

The U.S. Department of Interior, Fish and Wildlife Service's (USFWS) Office of Endangered Species publishes a list of federally designated Threatened and Endangered species. Copies of USFWS publications, including *Endangered and Threatened Wildlife and Plants; Review of Plant and Animal Taxa That are Candidates for Listing as Endangered or Threatened Species* may be obtained from the Publication Unit, U.S. Fish and Wildlife Service, Washington DC 20240 or viewed at: [fws.gov/endangered/](https://www.fws.gov/endangered/) or the Office of Federal Register website: [federalregister.gov/agencies/fish-and-wildlife-service](https://www.federalregister.gov/agencies/fish-and-wildlife-service)

Additional protections for most of Maryland's bird species are provided by the Migratory Bird Treaty Act, as enforced by USFWS. Their website can be viewed at: [fws.gov/birds/policies-and-regulations/laws-legislations/migratory-bird-treaty-act.php](https://www.fws.gov/birds/policies-and-regulations/laws-legislations/migratory-bird-treaty-act.php)

The Encyclopedia of Life includes information on such topics as life history, distribution, and taxonomic relationships of all taxa occurring throughout the world at the following link: [eol.org](https://www.eol.org).

NatureServe compiles data from all member programs in the Network of Natural Heritage Programs and Conservation Data Centers and provides a synthesis in the form of species summaries on their Explorer website: explorer.natureserve.org. The state ranks for Maryland shown in NatureServe's online database may be different than in this list due to the timing of data synchronization between the two databases.

Maryland

The Department of Natural Resources (DNR) conserves more than just rare, threatened, and endangered animals in Maryland. The state's reptiles and amphibians are also protected through regulations that limit the numbers and types of species that can be possessed without permits and that list the conditions under which permits from the DNR

would be required. These protections are provided in Code of Maryland Regulations (COMAR) 08.03.11. Furthermore, certain additional nongame mammals are provided protections through regulating activities that require permits under COMAR 08.03.08.15. For more information, regulations can be viewed on the state Division of State Documents website: dsd.state.md.us/COMAR/ComarHome.html

The Natural History Society of Maryland maintains collections of Maryland specimens at: marylandnature.org.

The Maryland Amphibian and Reptile Atlas provides information on the distribution of turtles, lizards, snakes, salamanders, frogs and toads in Maryland at: webapps02.dnr.state.md.us/mara/default.aspx?strSelection=SystemStats

The Maryland Biodiversity Project provides information on all species of animals known to occur in Maryland at: marylandbiodiversity.com/

For more information about Maryland's wildlife, habitats, and their conservation, see the 2015 Maryland State Wildlife Action Plan, available at: dnr.maryland.gov/wildlife/Pages/plants_wildlife/SWAP_home.aspx

To obtain additional copies of this report; to receive a copy of Rare, Threatened, and Endangered Plants of Maryland; or to receive other information on Maryland's rare species and natural areas; please contact the Maryland Wildlife and Heritage Service at Tawes State Office Building, E-1, 580 Taylor Avenue, Annapolis, MD 21401 or visit the website at: dnr.maryland.gov/wildlife/Pages/plants_wildlife/rte/rteplants.aspx

The conservation of Maryland's natural communities is vital in sustaining our natural diversity and rare species. These recurring assemblages of plants and animals are uniquely tied to a particular suite of environmental conditions and species adapted to those conditions. More information on Maryland's natural communities can be found at: dnr.maryland.gov/wildlife/Pages/plants_wildlife/nhpnatcomm.aspx

The Maryland Geological Survey (mgs.md.gov/) provides detailed physiographic maps with accompanying explanatory text, available at: mgs.md.gov/geology/physiographic_map.html.

HOW YOU CAN HELP

You can take an active part in conserving Maryland's rare species by contacting the Wildlife and Heritage Service with the following types of information:

I. Submitting observation information on rare, threatened or endangered species

1. Location details should be included (exact mapped location using GPS is preferred, but not required). Online mapping applications, such as Google Earth, are invaluable; however, precise written directions that include both driving and walking information are also acceptable.
2. Documentation that includes a photograph, description of the species, identification source, and habitat description should accompany the report.
3. Information on the ecology and/or biology of the species, such as observed and/or identified associated species, should accompany the report.

**Additional information, including a downloadable PDF of our rare species reporting form can be found at: dnr.maryland.gov/wildlife/Pages/plants_wildlife/rte_reportinginst.aspx

II. Assisting the Service with conservation status rank assessments

1. Submit data indicating that a species should be assigned a different rank and status, with supporting documentation.
2. Submit nominations of additional species to be included on the list or of species that should be deleted from the list, with supporting documentation.
3. Submit information on historical collections or documentation in the scientific literature.

APPENDIX II

ANIMAL SPECIES REPORTED, FALSELY REPORTED, OR POTENTIALLY OCCURRING IN MARYLAND

The following species do not regularly occur in Maryland based on currently available information. Although not exhaustive, the list is included to provide clarification for those species whose rank in Maryland may be unclear due to conflicting reports or vague published accounts. For those species with a rank of SR, only unverified reports exist. Species with a rank of SRF have been falsely reported, and the error may persist in the literature. The list is also provided to bring attention to those species that potentially occur in Maryland (SP) and, if documented, their presence could have significant conservation value.

SCIENTIFIC NAME	COMMON NAME	STATE RANK
<u>MOLLUSKS</u>		
<i>Alasmidonta marginata</i>	Elktoe	SRF
<u>INSECTS</u>		
Coleoptera		
<i>Photuris bethaniensis</i>	A Lampyrid Firefly	SP
