

Our Ocean

States Partner to Protect and Manage the Mid-Atlantic

At an Ocean Summit in New York City this June, the State of Maryland joined with the states of New York, New Jersey, Delaware and Virginia to announce a new Mid-Atlantic ocean partnership designed to address the region's priority ocean issues including offshore energy, climate change, water quality, and habitat protection.

The states' governors, through the newly formed Mid-Atlantic Regional Council on the Ocean, will advocate in one voice to leverage greater state influence on the management of offshore areas and help guide federal and interstate actions and resources.

"This new regional partnership with New York, New Jersey, Delaware and Virginia is an exceptional opportunity to create a more effective and efficient path to our shared environmental and economic goals," said Maryland Governor Martin O'Malley. "Working together with our sister States – pooling our resources and our expertise – we can and will ensure that our ocean is healthy, resilient and productive for our children and theirs."

Working together, the Mid-Atlantic Governors have agreed to act to: protect the region's ecologically significant offshore habitats; reduce the region's reliance on fossil fuels and increase its energy independence by making the Mid-Atlantic a leader in the appropriate development of offshore wind energy; strive to protect coastal residents, property, and economic and environmental infrastructure from climate change impacts; support the

health of the region's tourism and fishing industries by addressing threats to water quality; and engage the region's diverse ocean and basin interests as partners in advancing the Mid-Atlantic States' shared agenda by hosting a stakeholder summit.

Maryland Natural Resources Secretary John Griffin represented Governor O'Malley at the Summit.

Maryland's ocean jurisdiction extends three nautical miles offshore; however, the State – like its neighbors – has a vast interest in the ecological and economic resources located both within and beyond that jurisdiction.

"While we Marylanders are capable of meeting many challenges, the efforts of one State are not enough to protect and restore the Ocean we treasure," said

"This new partnership is designed to advance a regional approach to address the challenges facing our ocean, said Secretary Griffin. "It is evident that as much as we need the ocean, the ocean needs all of us to seize the opportunity before us and to act now."

Governor O'Malley. "This is why we have joined forces with our neighboring Mid-Atlantic States to embrace a new regional approach to its protection, restoration and management."
