Here are some things we learned from data submitted by cooperating striped bass anglers in 2010.

### Trophy Season (April 17-May 15)

- **Released Fish**
  - Sample size: 151 fish
  - Average size: 22.6 inches TL

- **Kept Fish**
  - Sample size: 149 fish
  - Average size: 34.4 inches TL

### Summer/Fall Season (May 16-Dec 31)

- **Released Fish**
  - Sample size: 243 fish
  - Average size: 17.4 inches TL

- **Kept Fish**
  - Sample size: 120 fish
  - Average size: 34.4 inches TL

### Methods

- **Trophy Season**
  - 40% caught trolling
  - 20% caught casting
  - 13% jigging

- **Summer/Fall Season**
  - 51% caught trolling
  - 22% caught jigging
  - 22% caught fly fishing
Cooperation has been great!

Fun Facts
- 72 anglers reported a total of 223 fishing trips
- 87% of trips were from boats, 5% from shore, and 6% each from the surf
- Anglers reported 3 trips on average—one angler reported data from 32 trips!
- The largest fish submitted was 50 inches

How we use the data:
- Data submitted by cooperating anglers, combined with data collected by fisheries scientists, is used to characterize the size and age composition of recreational harvest and releases
- Size composition of the catch is used to help determine minimum and maximum size regulations

More data helps us do our job managing striped bass so tell your friends and family who fish about the survey!

What we still need:
- Data from trips and catch on the Atlantic Coast
- Data from trips and catch on the Susquehanna Flats
- Be sure to provide the length and fate (kept or released) of each fish so your data can be used in fisheries management analyses

THANKS FOR YOUR PARTICIPATION!
YOUR DATA PLAYS A CRUCIAL ROLE IN FISHERIES MANAGEMENT
