#### Overview of the Department's Public Lands System

Maryland is recognized throughout the nation for its innovative land acquisition, conservation and preservation programs, including Program Open Space, the Rural Legacy Program, and Maryland Environmental Trust (MET). The Maryland Department of Natural Resources (Department or DNR) owns and manages over 504,000 acres of public lands and protected open space in the state. From Swallow Falls State Park in the Alleghenies to the Pocomoke River State Forest on the Eastern Shore, and from Fair Hill Natural Resources Management Area in northeast Maryland to Point Lookout State Park in Southern Maryland, the Department's public lands represent some of the most significant ecological and cultural landscapes found in Maryland. Each year, millions of visitors also enjoy DNR's public lands for a variety of outdoor recreational opportunities, including wildlife observation, photography, boating, fishing, hiking, hunting, mountain biking, and camping.

The purpose of this document is to provide the latest acreage report on the different types of land units that are owned and managed by the Department. This report is also prepared pursuant to Section 2 of Chapter 584 of 1995, as amended by Chapter 58 of 2015. DNR's Land Acquisition and Planning unit serves as the statewide acquisition and property control program for the Department. Program functions include the stewardship review for DNR's potential public lands, surveys and boundary recovery, lease and real estate conveyance management, and grants to local governments for land acquisition and development projects. Related to this report, the Real Property Acquisitions and Management Division is responsible for maintaining the deeds, records, and acreage figures for all of the Department's public lands. The acreages included in this report cover properties that have been settled through the close of the fiscal year.

For administrative purposes, DNR has divided the state into four regions that are identifiable by their physiographic and historical characteristics.

The approximate rounded acreage totals within each region are summarized below:

WESTERN	196,397
SOUTHERN	47,604
EASTERN	188,554
CENTRAL	71,943
•	•

504,498

#### **Land Unit Designations**

DNR's land units are designated according to their significance, resource management practices, and recreational focus, or by a special act enacted by the Maryland General Assembly. For reference in this document, the different land unit designations or types are briefly discussed below.

The **State Park System** is administered under the jurisdiction of the Maryland Park Service (MPS) unit to preserve and protect the best of Maryland's natural and historic places for the enjoyment and appreciation of its citizens. The State Park System includes five designations/sub-designations that have specific management objectives. For more information on amenities offered by the site please visit https://dnr.maryland.gov/publiclands/Documents/MD\_StateParksMap-Amenities.pdf.

- **State Parks** (SP) are managed to provide a multitude of public benefits, including natural resource conservation, cultural and historic preservation, watershed protection, education and nature-based outdoor recreation, including picnicking, boating, camping, cabins, hunting, fishing and swimming.
- Natural Resources Management Areas (NRMA) are generally state parks that feature an undeveloped, landscape of woodlands, fields and agriculture. These areas are managed for the primary benefit of wildlife habitat, sustainable farming and passive, nature-based recreation, such as hunting, fishing, wildlife observation and boat access. Historic site preservation and non-motorized trail use, including hiking, equestrian uses and mountain biking are also common.
- Natural Environment Areas (NEA) are generally state parks with significant or unique geological or ecological resources, including rare, threatened and endangered flora and fauna. These areas are often managed in cooperation with the Department's Wildlife and Heritage Service (WHS) to preserve and restore the park's unique natural resources and biological diversity. Recreational development is secondary to preservation objectives with a primary focus on interpretation and environmental education.
- State Battlefields (SB) are state parks that feature the preservation of a historic battlefield of state or national significance. Development is limited to providing public access and interpretation, while preserving the integrity of the battlefield grounds and historic features.
- Rail Trails (RT) are state parks that feature the conversion of a former railroad right-of-way to a recreational trail open to hiking, biking and equestrian uses. These include adjacent lands preserved along the trail as a greenway corridor, which provides natural scenery, wildlife habitat and natural and historical resource conservation. Historic features are preserved and interpreted along these trails, including the history of the former railroad and its remnants.

The **State Forest System** includes five categories of lands and facilities operated in support of managing, protecting, and restoring Maryland's public and private forestlands. All of these areas are administered under the jurisdiction of the Maryland Forest Service (MFS):

- A **State Forest (SF)** is managed for multiple purposes, including water quality protection, wildlife enhancement, sustainable forest products, scenic and natural beauty, and low-intensity recreation. State forests are distinguished by larger acreages managed in accordance with independent third-party forest certification standards established by the Sustainable Forestry Initiative (SFI) and the Forest Stewardship Council (FSC). Several State Wildlands and Heritage Conservation Fund sites are located within the state forests and are managed for their unique natural features and values as part of the State Forest System.
- A **Demonstration Forest** is managed to achieve the same broad purposes as a state forest, with a specific emphasis on implementing forest management practices for demonstration purposes for the state's private woodland owners. These areas are distinguished by smaller acreages and are not included in the state's SFI-FSC forest certification certificate.
- The **John S. Ayton Tree Nursery** produces a variety of bare-root tree seedling species for forest conservation plantings on private and public lands.
- The **Chesapeake Forest Lands** were specifically acquired to be retained as working forest lands to produce sustainable forest products and help maintain local employment, as well as to protect traditional outdoor recreational opportunities on Maryland's Eastern Shore. All use and management of these lands are

implemented in accordance with the purposes of sustainable forestry and the state's SFI-FSC forest certification requirements.

- Forest Fire Tower (FT) sites were constructed in the early part of the 20th century as part of Maryland forest protection efforts, with the purpose of quickly detecting forest fires and reducing fire danger to the public. As time progressed, with the expansion of road networks and improved communications technology, several Fire Towers were converted to platforms for communications equipment. In addition, several Forest Service field offices are co-located and operated on the same site as Fire Tower locations.

A **Wildlife Management Area** (WMA), administered by WHS, focuses on wildlife management activities and low-intensity wildlife-related recreation. These areas were acquired by the state to protect, propagate, or manage wildlife, or for hunting purposes. At the Department's discretion, these areas may be open to nature-based outdoor recreational activities, including hunting, fishing, hiking, camping, and wildlife watching. Many areas were purchased with federal funds that restrict intensive development and certain types of outdoor recreational activities that impact wildlife-dependent areas.

A **Fishery Management Area (FMA)** is maintained to support fishery resources, operate fish culture facilities, or provide access to fishing and other outdoor recreational activities. The areas may also provide protection from development or deforestation for sensitive or high-quality watersheds. These areas are managed by Fishing and Boating Services.

- **Fishery Management Propagation Areas** include all state fish hatcheries, culture stations and related resources and assets. Some areas also include offices for Freshwater Fisheries Regional Operations. These areas are reserved for fish production and management activities required to meet core objectives.
- Fishery Management Public Fishing Areas (PFA) include impoundments and stream access areas that provide angling and other outdoor recreational opportunities such as boating, hiking and picnicking. These areas may include amenities such as boat launches, bathroom facilities, picnic areas, fishing platforms or decks, parking areas and access paths or trails. Impoundments typically include dam structures and associated valves and spillways. Fish passage structures are present at some dams.

#### Other Designations used in this document:

The **Maryland Wildlands Preservation System** is the state's counterpart to the federal government's National Wildlands Preservation System. Protected properties are designated as state wildlands by the Maryland General Assembly. A **State Wildland** is a special protected area established by legislation that "overlays" all or part of a state park, forest, wildlife management area or other land unit. There are over 65,956 acres of Wildlands in the state that are recognized as containing wilderness characteristics and otherwise outstanding and unique natural features worthy of preservation. There are three types of wildlands defined; currently, only types 1 and 2 have been identified in the Maryland Wildlands Preservation System.

- (1) Type I Wildland means a primitive area which by its size and location, is in effect untouched by urban civilization and can offer the experience of solitude and self-reliance. Type I wildlands are usually lands located at higher elevations that protect watersheds and are ecologically vulnerable to human interference.
- (2) **Type II Wildland** means a unit of importance for natural sciences and ecology with outstanding value for education, research, and appreciation of natural processes. Preservation of the desired natural condition is the prevailing purpose of the Type II wildlands.
- (3) **Type III Wildland** means an area which is not of ecological or primitive stature, but has the appearance of being in an untouched natural state.

A **Heritage Conservation Site** is a property that has been acquired specifically for the protection of identified endangered plant or animal species and significant habitats. These sites are found within and managed by Department land units.

**Marine/Communication Facilities** are properties that include law enforcement communications facilities as well as water access sites. These sites can be under a special management or partnership arrangement with multiple Department units, another government agency or nonprofit entity.

An **Undesignated** Land Unit is a property that often is under a special management or partnership arrangement with another government or nonprofit entity, or may also include newly acquired properties that are

undergoing or have yet to undergo a public involvement and planning process; the recommendations in a completed plan determine designation(s) of a land unit.
