CROSSING ZONE**

 Indicates stream improvement locations

The Maryland Department of Natural Resources is partnering with the State Highway Administration to improve over two miles of Charles Branch tributaries within Rosaryville State Park. Stream banks will be stabilized to reduce the amount of sediment and nutrients entering waterways.

No park closures will occur as a result of this work, although visitors will see a substantial amount of construction equipment being moved around the site. **Please pay attention to all construction signs and do not cross construction barriers** - they are there for your safety.

The Perimeter Trail will remain open at all times with the exception of a **2-3 week period of closure when construction is occurring in the immediate vicinity of the trail stream crossing**. Other portions of the trail will remain open, and there may be flaggers present when equipment is being moved. All other trails will be unaffected. Thank you for your cooperation!
