

OTTER POINT CREEK, HARFORD COUNTY

One of the largest remaining freshwater, tidal marshes within the upper Chesapeake Bay can be found at Otter Point Creek Natural Area. Here a large stand of wild rice attracts and feeds numerous wildlife, like the rare and elusive king rail (*Rallus elegans*), as well as a variety of waterfowl. The rare Maryland bur-marigold (*Bidens bidentoides* var. *mariana*) serves as a beacon for butterflies. American beavers, common muskrats, American minks and northern river otters can be found in these marshes, as well as aquatic turtles and the Threatened least tern (*Sternula antillarum*), a small colonial nesting waterbird that plunges for fish. Visitors can access the Natural Area by canoe or kayak. The Natural Area is the focal point of the Otter Point Creek component of the Chesapeake Bay National Estuarine Research Reserve in Maryland (CBNERR-MD).

Look for playful northern river otters and water-loving common muskrats (below) among the marshes.

THE BASICS

- Limited Facilities
- Canoe/Kayak Access Areas
- Trails and Information Boards
- Anita C. Leight Estuary Center

WIKIMEDIA COMMONS

In addition to Otter Point Creek, two other sites make up the CBNERR-MD network: Monie Bay and Jug Bay. These three sites represent the diverse estuarine systems found within Maryland's portion of the Bay. These reserves provide essential habitat for multiple fish species as well as the beloved blue crab, while also serving as sediment filters for the Bay and shoreline protection. The wetland area is owned by the Harford County Chapter of the Izaak Walton League of America, and the entire area is managed in cooperation with Harford County Department of Parks and Recreation and the Maryland Department of Natural Resources CBNERR-MD program. Information on the Otter Point Creek National Estuarine Research Reserve can be found on its website at: www.otterpointcreek.org. Otter Point Creek is also home to the Anita C. Leight Estuary Center, providing education, research and increased understanding of estuaries.

KEY ELEMENTS

- King Rail
- Least Tern
- Maryland Bur-marigold
- Wild Rice Freshwater Marsh

NOAA / WIKIMEDIA COMMONS

Blue crabs are found in both fresh and salt water.

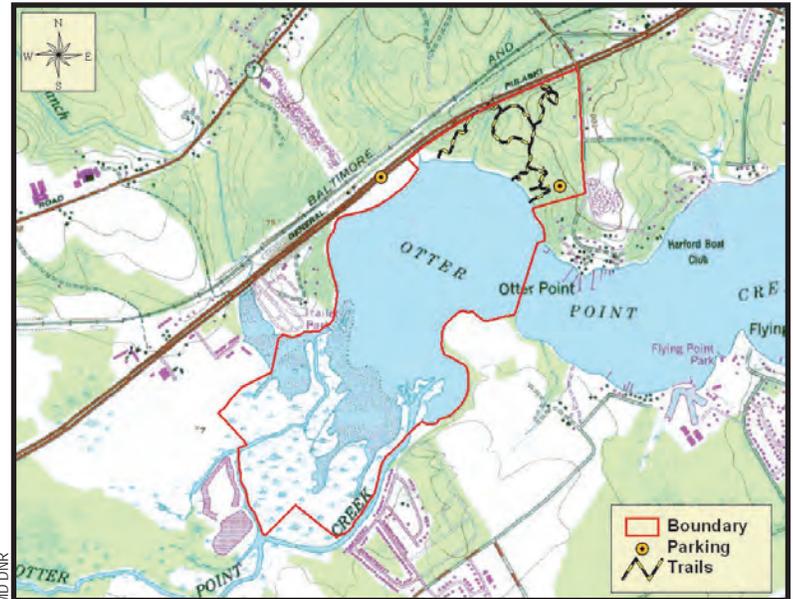

OTTER POINT CREEK, HARFORD COUNTY

Directions

From Baltimore: Travel I-695 (Baltimore Beltway) to Exit 33 at I-95 and head north about 12 miles. Take Exit 77 onto MD 24 (Veterans Memorial Highway) south toward Edgewood. In 1 mile, turn left at the ramp for US 40 (Pulaski Highway) and left again in 0.2 mile to head east on US 40. Go 2 miles and turn right at the light for Otter Point Road. In 0.4 mile, turn right at the Anita C. Leight Estuary Center entrance.

To go to the Otter Creek Boat Ramp from the Estuary Center, turn right onto Otter Point Road. Make a slight right turn to stay on Otter Point Road and proceed another 0.2 mile to the boat ramp behind the Otter Point Marina.

Otter Point Creek Natural Area

KERRY WIXTED

Wild About Rice

Wild rice is abundant along Otter Point Creek Natural Area. At one time, this marsh plant was a staple food to many Native American cultures. Despite its name, it is not related to the Asian rice which graces many tables throughout the world. Today, the main consumers of wild rice include marshbirds such as rails, as well as red-winged blackbirds and bobolinks which are also known as "rice birds".

USFWS

Left: Wild rice is the only grain native to North America and is an important food source for bobolinks (shown right). In breeding plumage, males are a striking black and white with a straw-colored patch on the back of the head. Females are a buffy, yellow-brown color.

The Izaak Walton League

Formed in 1922, the Izaak Walton League (IWLA) is one of America's oldest conservation organizations. The IWLA is an organization of grassroots volunteers that seeks to restore watersheds, reduce air pollution, protect wildlife habitat and open space and instill conservation ethics in outdoor recreationists. Protecting the wetlands at Otter Point Creek Natural Area is a great example of the IWLA's approach to conservation. Improving conservation efforts in the Chesapeake Bay is one of the IWLA's priority regional projects.

WATCH OUT FOR!

- Poison Ivy
- Biting Insects
- Tide Changes
