

Stormwater Objective Synopsis

From Minutes of 2/20/14

- Recommend a study be completed that identifies existing stormwater problems at a subwatershed level.
- Most problems revolve around older subdivisions and developments. Consider instituting an incentive program modeled after the Bay Yardstick program. The problem is that program does not factor in maintenance costs.
- Create brochures for the roads garages with best management practices. Secure a commitment from the county to adhere to those practices whenever practicable.
- Make educational materials about best stormwater practices available to property owners in the watershed.
