	Yes		No	$\boxtimes$	N/A	Nonconformities from previous audit were reviewed. [If yes, explain]

#### I. Future Audit Schedule

Following the initial registration audit, continued certification requires annual assessments commonly referred to as "Surveillance Audits". Additionally, at the end of the certification period, maintaining certification requires the completion of a recertification or "Reassessment Audit". The following table lists the dates of the audits in the current certification period and (for multi-site certificates) the sites chosen at each visit.

Registration / Reassessment	Surveillance 1	Surveillance 2	Surveillance 3	Surveillance 4
Date(s)	Date(s)	Date(s)	Date(s)	Date(s)
April 7-11, 2014	April 7-9, 2015	April 26-28, 2016	April 24-27, 2017	
Sites visited	Sites visited Sites visited		Sites visited	Sites visited
	Chesapeake Forest Lands, Garrett State Forest, Green Ridge State Forest	Green Ridge State Forest, Garrett State Forest, Savage River State Forest	Chesapeake State Forest, Pocomoke State Forest

# NSF International Forestry Program Audit Notification Letter

April 10, 2017

Jack Perdue, Maryland DNR Forest Service 580 Taylor Avenue Annapolis, MD 21401

#### RE: Confirmation of SFI 2015-2019 Standards and Rules®, Section 2 Surveillance Audit

Dear Mr. Perdue,

As we discussed, I will be conducting your SFI 2015-2019 Standards and Rules®, Section 2 Surveillance Audit as described in the attached itinerary. Please confirm that these dates are still appropriate for the audit of your program's continued conformance to the SFI 2015-2019 Forest Management Standard.

#### **Preparing for the Audit**

A key part of the audit is a review of selected evidence related to your program, which may include:

- SFI Procedures
- SFI Evidence Manual
- Forest management planning
- Harvest trends
- Forest inventory system
- Documentation of forest practices
- Documentation for conservation of biological diversity
- Program for protection of T&E species, FECV, and special sites
- Management of harvesting on visual quality aesthetics, harvest size, green-up requirements
- · Efficient use of fiber resources
- Recognition and respect of Indigenous Peoples' Rights
- Compliance with applicable laws and regulations
- Documentation for participation in research and regional assessments
- Knowledge of climate change impacts on wildlife, wildlife habitats and conservation of biological diversity
- Public outreach for sustainable forestry
- Internal Audit records
- Management Review records
- Training records
- Monitoring of BMPs
- Documentation for operation of complaint procedure
- Policies regarding certification

Please have this information available for me during the audit.

During the Audit we will focus on the following SFI Objectives and Performance Indicators: Objective 3, Performance Measure 4.2, Performance Measure 4.3, Objective 6, Objective 8, Objective 13, Objective 14, and Objective 15.

Scope of Certification:

The forest management program of the Maryland Department of Natural Resources on the following Maryland State Forests: Chesapeake Forest Lands, Pocomoke State Forest, Green Ridge State Forest, Garrett State Forest, Potomac State Forest, and the Savage River

State Forest. The SFI Certificate Number is NSF-SFIS-0Y301.

#### Role of SFI Inc. Office of Label Use and Licensing

As a reminder, your organization is responsible for contacting SFI, Inc. and complying with all requirements before using or changing any SFI label or logo. Your contact is:

**Rachel Dierolf** Manager of Statistics and Labeling Sustainable Forestry Initiative, Inc. 900 17<sup>th</sup> Street NW, Suite 700 Washington, DC 20006 613-274-0124 rachel.dierolf@sfiprogram.org

#### **Agenda for Review**

Attached for your review is the tentative agenda that will guide the conduct of the audit. Please contact me via email or phone if you would like to recommend changes or have any questions regarding what is needed for the audit.

Thank you for selecting NSF International to provide your audit services.

Sincerely,

## **7ucker Watts**

Lead Auditor, NSF 601-622-6487 Jtwatts1@gmail.com

# **Audit Agenda**

Type	Type of Audit										
	Readiness Review (Stage 1)		Registration (Stage 2)		Surveillance						
	Reassessment		Transfer		Verification						
	Other										

# **Audit Objectives**

Determine if certification should be maintained.

## Schedule

Day/Date	Time	Activity/Process and Location to be Audited	Auditor
April 24, 2017	8:00 AM	Office – Opening Meeting, presentation of MD DNR, changes to management system, results of most recent management review, finalize field itinerary, etc.	Tucker Watts/Kyle Meister
	8:30 AM	Review of the SFI Program (SFI 2015-2019 Forest Management Standard)  Objectives 1-15 Requirements for Forest Management Standard  1. Protection and Maintenance of Water Resources 2. Conservation of Biological Diversity 3. Protection of Special Sites 4. Recognize and Respect Indigenous People' Rights 5. Public Land Management Responsibilities 6. Communication and Public Reporting 7. Management Review and Continual Improvement	Tucker Watts/Kyle Meister
	11:00 AM	Field – Audit team together for calibration	Tucker Watts/Kyle Meister
	4:30 PM	Summary of day – Discuss agenda for next day	Tucker Watts/Kyle Meister
April 25, 2017	8:00 AM	Agenda Review	Tucker Watts/Kyle Meister
	8:15 AM	Review of Field Sites	Tucker Watts/Kyle Meister
	4:30 PM	Summary of day – Discuss agenda for next day	Tucker Watts/Kyle Meister
April 26, 2017	8:00 AM	Agenda Review	Tucker Watts/Kyle Meister

	8:15 AM	Review of Field Sites	Tucker Watts/Kyle Meister
	1:00 OM	Forest Management Contractor's office – View any documentation, records, GIS, etc. related to latest activities and any follow-up to field-related questions.	Tucker Watts/Kyle Meister
	4:30 PM	Summary of day – Discuss agenda for next day	Tucker Watts/Kyle Meister
April 27, 2017	8:00 AM	Agenda Review	Tucker Watts/Kyle Meister
	8:15 AM	Auditor deliberations	Tucker Watts/Kyle Meister
	10:30 AM	Closing Meeting (Auditors depart no later than 1:00pm)	Tucker Watts/Kyle Meister

#### Appendix 2

# Maryland DNR Forest Service 2017 SFI Forest Management Summary Report

#### Introduction

The SFI Program of the Maryland DNR Forest Service of Annapolis, Maryland has achieved continuing conformance with the SFI® 2015-2019 Forest Management Standard, according to the NSF SFIS Certification Audit Process and has specifically demonstrated conformance to the sustainable harvest level requirement (Performance Measure 1.1).

The Maryland DNR Forest Service initially obtained SFI Certification from NSF on July 24, 2003 and the program was recertified in July 2006. Initially only the Chesapeake Forest Lands were certified, with the Pocomoke State Forest added in 2009 as part of an expansion of scope that included other recently acquired lands. In 2011 the organization sought and was granted recertification within the expanded scope based on an audit of the six largest state forests against the SFI 2010-2014 Standard. The state forests included in the current scope were re-certified to the SFIS in April of 2014. The most recent audit was a surveillance audit in April 2016.

Maryland DNR Forest Service has an extensive program for harvest planning and approval. A Sustainable Forest Management Plan has been developed for each forest. Harvests levels have been modeled by forest type for sustainability by area control for a 50-year planning horizon. From the Sustainable Forest Management Plan an Annual Work Plan is developed. Included in the Annual Work Plan are planned harvests. The Annual Work Plan is reviewed by various agencies in the Maryland DNR, and a Citizen's Advisory Team. It is also posted on the Maryland DNR Forest Service website for public comment for a period of 30 days. Following review of comments the finalized Plan is approved and posted on the Maryland DNR Forest Service website.

This report describes the results of the 2017 Surveillance Audit which considered changes in operations, the management review system, and efforts at continuous improvement. A subset of the SFI requirements were selected for detailed review.

#### **Maryland's State Forests**

Maryland DNR Forest Service is responsible for the management of the 215,607 acres of Maryland State Forests through a variety of designations. The Forest Service is supported by other agencies within the Department of Natural Resources including Wildlife, Fisheries, Heritage, and the Natural Resources Police. Various management plans provide a useful summary of the importance of these forestlands and the broad policy goals:

#### **Excerpted from the Savage River State Forest Draft Management Plan:**

'The resources and values provided from state forests reach people throughout the State and beyond. These resources and values range from economic to aesthetic and from scientific to inspirational. The Department of Natural Resources is mandated by law to consider a wide variety of issues and uses when pursuing a management strategy for these forests. The importance of considering these factors is acknowledged in the Annotated Code, which establishes the following policy pertaining to state forests and parks:

"Forests, streams, valleys, wetlands, parks, scenic, historic and recreation areas of the state are basic assets. Their proper use, development, and preservation are necessary to protect and promote the health, safety, economy and general welfare of the people of the state. It is the policy of the state to encourage the economic development and the use of its natural resources for the improvement of the local economy, preservation of natural beauty, and promotion of the recreational and leisure interest throughout the state." (Annotated Code of Maryland, Natural Resources Article §5-102)

The Department recognizes the many benefits provided by state forests and has established a corresponding management policy in regulation.

"The state forests are managed to promote the coordinated uses of their varied resources and values for the benefit of all people, for all time. Water, wildlife, wood, natural beauty and opportunities for natural environmental recreation, wildlands experience, research demonstration areas, and outdoor education are major forest benefits. "(Code of Maryland Regulations 08.07.01.01)'

The audit was performed by NSF on April 24-27, 2017 by an audit team headed by Tucker Watts, Lead Auditor. Kyle Meister served as a team member. Audit team members fulfill the qualification criteria for conducting audits contained in SFI 2015-2019 Standards and Rules, Section 9 - Procedures and Auditor Qualifications and Accreditation.

The objective of the audit was to assess conformance of the firm's SFI Program to the requirements of the SFI 2015-2019 Standard and Rules, Section 2 – Forest Management.

The scope of the audit included forest management operations. Forest practices that were the focus of field inspections included those that have been under active management over the planning period of the past 3 years. In addition practices conducted earlier were also reviewed as appropriate (regeneration and BMP issues, for example); SFI obligations to promote sustainable forestry practices, to seek legal compliance, and to incorporate continual improvement systems were also within the scope of the audit.

The SFI Standard was used without modifying any requirements. SFI requirements that are outside of the scope of Maryland's SFI program were excluded from the scope of the SFI Certification Audit as follows:

Indicator 10.1.2. Research on genetically engineered trees via forest tree biotechnology shall adhere to all applicable
federal, state, and provincial regulations and international protocols ratified by the United States and/or Canada depending
on jurisdiction of management. Maryland DNR Forest Service does not participate in research on genetically engineered
trees.

#### **Audit Process**

NSF initiated the SFI audit process with a series of planning phone calls and emails to reconfirm the scope of the audit, review the SFI Indicators and evidence to be used to assess conformance, verify that Maryland DNR Forest Service was prepared to proceed to the SFI Audit, and to prepare a detailed audit plan.

The audit was governed by a detailed audit plan designed to enable the audit team to efficiently determine conformance with the applicable requirements. The plan provided for the assembly and review of audit evidence consisting of documents, interviews, and on-site inspections of ongoing or completed forest practices.

During the audit NSF reviewed a sample of the written documentation assembled to provide objective evidence of conformance. NSF also selected field sites for inspection based upon the risk of environmental impact, likelihood of occurrence, special features, and other criteria outlined in the NSF protocols. NSF selected and interviewed stakeholders such as contract loggers, landowners and other interested parties, and interviewed employees within the organization to confirm that the SFI Standard was understood and actively implemented.

The possible findings of the audit included conformance, major non-conformance, minor non-conformance, opportunities for improvement, and practices that exceeded the requirements of the standard.

A report was prepared and final approval was done by an independent Certification Board Member assigned by NSF. Follow-up or Surveillance Audits are required by the Sustainable Forestry Initiative Standard \*. The next Surveillance Audit is scheduled for April, 2018.

#### **Overview of Audit Findings**

Maryland's SFI Program demonstrated conformance against the SFI 2015-2019 Standard. There were two non-conformances, and three "Opportunities for Improvement". The program has continued to exceed the standard in several areas. As such, the program has earned continuing certification.

There were no 2016 Non-Conformances.

Two Minor Non-Conformances were identified in the 2017 audit:

- 1. In the FY2017 Annual Work Plans (AWP) for western State Forests the Ecologically Significant Area (ESA) Plans have not been completed. (SFI 2015-2019 Standards and Rules®, Section 2 Forest Management, 1Indicator 1.1.1 i)
- 2. On the Maryland DNR Forest Service website the words "Sustainable Forestry Initiative" do not include the registered trademark ®. (SFI 2015-2019 Standards and Rules®, Section 5 Part 4, Indicator 4.2)

Progress in implementing these corrective action plans will be reviewed in subsequent surveillance audits.

One opportunity for improvement (OFI) was identified in the 2017 audit:

1. There is an Opportunity for Improvement by including in forest management plans more information (known by forest managers) about the role of conifers in the natural history, historic composition, and ecology of higher-elevation portions of the western forests. (SFI 2015-2019 Standards and Rules®, Section 2 – Forest Management, 1Indicator 1.1.1 i)

These findings do not indicate a current deficiency, but served to alert Maryland DNR Forest Service to areas that could be strengthened or which could merit future attention.

NSF also identified the following areas where forestry practices and operations of Maryland DNR Forest Service exceed the basic requirements of the standard:

- 1. The MD DNR program exceeds the requirements for addressing management and *protection* of rivers, streams, lakes, *wetlands*, other water bodies and *riparian areas* during all phases of management. (SFI 2015-2019 Standards and Rules®, Section 2 Forest Management, 1Indicator 3.2.1)
- 2. The MD DNR program exceeds the requirements for plans that address wet-weather events in order to maintain water quality. (SFI 2015-2019 Standards and Rules®, Section 2 Forest Management, 1Indicator 3.2.4)
- 3. The MD DNR program exceeds the requirements for the protection of threatened and endangered species. (SFI 2015-2019 Standards and Rules®, Section 2 Forest Management, 1Indicator 4.2.1)
- 4. The MD DNR program exceeds the requirements address visual quality management. (SFI 2015-2019 Standards and Rules®, Section 2 Forest Management, Indicator 5.1.1)
- 5. The MD DNR's use of information and expert advice or stakeholder consultation in the identification special sites for protection exceeds the requirements for this indicator. (SFI 2015-2019 Standards and Rules®, Section 2 Forest Management, Indicator 6.1.1)
- 6. The Maryland Forest Service has implemented an exceptional program for contact with local stakeholders over forest management issues. (SFI 2015-2019 Standards and Rules®, Section 2 Forest Management, Indicator 13.1.1)

#### **General Description of Evidence of Conformity**

NSF's audit team used a variety of evidence to determine conformance. A general description of this evidence is provided below, organized by SFI Objective.

#### Objective 1 Forest Management Planning

To ensure forest management plans include long-term sustainable harvest levels and measures to avoid forest conversion.

Summary of Evidence: The forest management plans for each state forest and supporting documentation and the associated inventory data and growth analyses were the key evidence of conformance. The plans for all six of the forests involved (four plans cover the six forests) were key to this finding.

#### Objective 2 Forest Health and Productivity

To ensure long-term forest productivity, carbon storage and conservation of forest resources through prompt reforestation, afforestation, minimized chemical use, soil conservation, and protecting forests from damaging agents.

Summary of Evidence: Field observations and associated records were used to confirm practices. Maryland DNR Forest Service has programs for reforestation, for protection against insects, diseases, and wildfire, and for careful management of activities which could potentially impact soil and long-term productivity. Special recreation-oriented grants allow for some road maintenance work, further supporting conformance.

#### Objective 3 Protection and Maintenance of Water Resources

To protect the water quality of rivers, streams, lakes, wetlands and other water bodies through meeting or exceeding best management practices.

Summary of Evidence: Field observations of a range of sites were the key evidence. Auditors visited the portions of field sites that were closest to water resources. Auditors also confirmed strong programs for planning and for project oversight that ensure protection of water resources.

#### Objective 4 Conservation of Biological Diversity

To manage the quality and distribution of wildlife habitats and contribute to the conservation of biological diversity by developing and implementing stand- and landscape-level measures that promote a diversity of types of habitat and successional stages, and the conservation of forest plants and animals, including aquatic species, as well as threatened and endangered species, Forests with Exceptional Conservation Value, old-growth forests and ecologically important sites.

Summary of Evidence: Field observations, written plans and policies for the protection of old growth, High Conservation Value Forests, and representative sample areas were the key evidence used to assess the requirements involved biodiversity conservation. This was supported by the availability of college-trained field biologists to conduct project reviews.

#### Objective 5 Management of Visual Quality and Recreational Benefits

To manage the visual impact of forest operations and provide recreational opportunities for the public.

Summary of Evidence: Field observations of completed operations and policies/procedures for visual quality were assessed during the evaluation. Interviews with stakeholders and partners, maps and descriptions of recreation sites, combined with selected field visits helped confirm a strong recreation program. Stakeholder contacts supported the DNR's statements regarding efforts to balance recreational use and environmental protections.

#### Objective 6 Protection of Special Sites

To manage lands that are geologically or culturally important in a manner that takes into account their unique qualities.

Summary of Evidence: Field observations of completed operations, GIS maps and other records of special sites, training records, and written protection plans were all assessed during the evaluation. Partners within the DNR and outside stakeholders participate in identification of special sites.

#### Objective 7 Efficient Use of Fiber Resources

To minimize waste and ensure the efficient use of fiber resources.

Summary of Evidence: Field observations of completed operations, contract clauses, and discussions with supervising field foresters and with loggers provided the key evidence. The Maryland Forest Service is working to improve markets for forest products, particularly markets related to bioenergy.

#### Objective 8 Recognize and Respect Indigenous Peoples' Rights

To recognize and respect Indigenous Peoples' rights and traditional knowledge.

Summary of Evidence: All of the management plans include the policy statement developed to recognize and respect Indigenous Peoples' rights. Mechanisms are in place to receive and act on any comments received.

#### Objective 9 Legal and Regulatory Compliance

To comply with applicable federal, provincial, state and local laws and regulations.

Summary of Evidence: The program employs specialists to ensure that conservation laws are followed. All project receive extensive review by interdisciplinary teams. Protocols are in place which have been checked to ensure compliance.

#### Objective 10 Forestry Research, Science and Technology

To invest in forestry research, science and technology, upon which sustainable forest management decisions are based and broaden the awareness of climate change impacts on forests, wildlife and biological diversity.

Summary of Evidence: Discussions with stakeholders and support for research on state forest lands were the key evidence used. Forests are used for several ongoing research projects such as research projects involving Chestnut blight hypo-virulence, Wood rat biology, and biology of Spotted skunks, as well as a major trial of a pesticide to control the Hemlock Wooly Adelgid.

#### Objective 11 Training and Education

To improve the implementation of sustainable forestry practices through appropriate training and education programs.

Summary of Evidence: Interviews, review of training records, and the records of support for the Maryland Master Logger Program were key evidence for this objective. All harvests are conducted by logging crews with one or more Maryland Master Loggers.

#### Objective 12 Community Involvement and Landowner Outreach

To broaden the practice of sustainable forestry through public outreach, education, and involvement, and to support the efforts of SFI Implementation Committees.

Summary of Evidence: Forest mangers interviewed described various outreach/educational efforts including periodic tree planting events, annual 1-day course for Garret County students in preparation for the Maryland Envirothon; two courses at Garrett College (Dendrology, Forest Management); periodic hikes and tours; speaking to local citizens groups; and forestry talks at the GRSF overlook to tour bus groups among others. Interviews with members of two of the citizen's advisory groups, and the DNR website were also used to confirm conformance with these requirements.

#### Objective 13 Public Land Management Responsibilities

To participate and implement sustainable forest management on public lands.

Summary of Evidence: The audit team reviewed written and on-line documentation of the extensive public involvement processes. The organization has a thorough process for involvement in public land planning. Annual work plan (AWP) drafts are provided to citizen advisory councils and field visits are scheduled to solicit input. After these revisions are made the drafts are made available for review by the general public. The web site and the AWPs contain information on the review process, and the results of the input are summarized in the AWPs.

#### Objective 14 Communications and Public Reporting

To increase transparency and to annually report progress on conformance with the SFI Forest Management Standard.

Summary of Evidence: Reports filed with SFI Inc. and the SFI Inc. website provided the key evidence. The state forests web site includes the complete certification reports from the past years.

#### **Objective 15. Management Review and Continual Improvement**

To promote continual improvement in the practice of sustainable forestry by conducting a management review and monitoring performance.

Summary of Evidence: The state forests web site includes the organization's Sustainable Forestry Initiative Management Reviews for the past 10 years. The most recent of these program reviews, agendas and notes from field reviews, and interviews with personnel from all involved levels in the organization were assessed to determine conformance.

#### **Relevance of Forestry Certification**

Third-party certification provides assurance that forests are being managed under the principles of sustainable forestry, which are described in the Sustainable Forestry Initiative Standard as:

#### 1. Sustainable Forestry

To practice sustainable forestry to meet the needs of the present without compromising the ability of future generations to meet their own needs by practicing a land stewardship ethic that integrates reforestation and the managing, growing, nurturing and harvesting of trees for useful products and ecosystem services such as the conservation of soil, air and water quality, carbon, biological diversity, wildlife and aquatic habitats, recreation and aesthetics.

#### 2. Forest Productivity and Health

To provide for regeneration after harvest and maintain the productive capacity of the forest land base, and to protect and maintain long-term forest and soil productivity. In addition, to protect forests from economically or environmentally undesirable levels of wildfire, pests, diseases, invasive exotic plants and animals and other damaging agents and thus maintain and improve long-term forest health and productivity.

#### 3. Protection of Water Resources

To protect water bodies and riparian areas, and to conform with forestry best management practices to protect water quality.

#### 4. Protection of Biological Diversity

To manage forests in ways that protect and promote biological diversity, including animal and plant species, wildlife habitats, and ecological or natural community types.

#### 5. Aesthetics and Recreation

To manage the visual impacts of forest operations, and to provide recreational opportunities for the public.

#### 6. Protection of Special Sites

To manage lands that are ecologically, geologically or culturally important in a manner that takes into account their unique qualities.

# 7. Responsible Fiber Sourcing Practices in North America

To use and promote among other forest landowners sustainable forestry practices that are both scientifically credible and economically, environmentally and socially responsible.

#### 8. Legal Compliance

To comply with applicable federal, provincial, state, and local forestry and related environmental laws, statutes, and regulations.

#### Research

To support advances in sustainable forest management through forestry research, science and technology.

#### 10. Training and Education

To improve the practice of sustainable forestry through training and education programs.

#### 11. Community Involvement and Social Responsibility

To broaden the practice of sustainable forestry on all lands through community involvement, socially responsible practices, and through recognition and respect of Indigenous Peoples' rights and traditional forest-related knowledge.

#### 12. Transparency

To broaden the understanding of forest certification to the SFI Standard by documenting certification audits and making the findings publicly available.

#### 13. Continual Improvement

To continually improve the practice of forest management, and to monitor, measure and report performance in achieving the commitment to sustainable forestry.

## 14. Avoidance of Controversial Sources including Illegal Logging in Offshore Fiber Sourcing

(Applies only to the SFI 2015-2019 Fiber Sourcing Standard

To avoid wood fiber from illegally logged forests when procuring fiber outside of North America, and to avoid sourcing fiber from countries without effective social laws.

	ping of rivers, streams, lakes, wetlands and other water bodies as specified in state or provincial best management tices and, where appropriate, identification on the ground.								
□ N/A	☐ Conforms ☐ Exceeds ☐ O.F.I. ☐ Minor NC ☐ Major NC								
Audit Notes:	Confirmed mapping of rivers, streams, lakes, and other water bodies in GIS databases and for timber sale maps. Witnessed for sites visited.								
3.2.3 Document and implement plans to manage and protect rivers, streams, lakes, <i>wetlands</i> , other water bodies and <i>riparian areas</i> .									
□ N/A	☐ Conforms ☐ Exceeds ☐ O.F.I. ☐ Minor NC ☐ Major NC								
Audit Notes:	Notes: Observations during site visits confirm that plans to manage or protect rivers, streams, lakes, and other water bodies are developed and implemented. Most such features are protected by generous no-cut buffers, or by being placed within large ecological reserves. Buffers witnessed during harvesting, prescribed burns, and chemical application.								
3.2.4 Plans that address wet-weather events in order to maintain water quality (e.g., <i>forest inventory</i> systems, wet-weather tracts, definitions of acceptable operating conditions).									
□ N/A	☐ Conforms   ☐ Exceeds   ☐ O.F.I.   ☐ Minor NC   ☐ Major NC								
Audit Notes:	Maryland Forest Service exceeds the requirements for planning that addresses wet-weather events in order to maintain water quality.								
2017 AWP Forest Harvest Proposal for State Forest from Internal Silvicultural Audit 2017 contains section for "Water Quality & Best Management Practices (BMPs)". Foresters work with loggers to ensure an understanding of the allowable amount of soil disturbance and rutting and to ensure that harvests are suspended when soils are too water-saturated to support logging equipment. Wet-weather tracts are set up and sold, or more commonly harvest operations are encouraged to harvest the drier portions of tracts when weather is wet and to harvest the lower, wetter portions of tracts during dry weather periods. Contracts for sale of timber are sufficiently long to allow such operational adjustments, and provisions exist for contract extensions.									
	Forester's report that most loggers know to avoid operating during wet weather events, and that they check on all loggers when conditions are questionable, with extra inspections for contractors who have less experience on state forest harvests. Contracts include a provision empowering Maryland Forest Service to shut down jobs.								
	During site visits minimal rutting was witnessed. No impact was witnessed to water quality.								

Audit Notes:

# Objective 4 Conservation of Biological Diversity

To manage the quality and distribution of *wildlife habitats* and contribute to the *conservation* of *biological diversity* by developing and implementing *stand-* and *landscape-*level measures that promote a diversity of types of *habitat* and successional stages, and the *conservation* of forest plants and animals, including *aquatic species, as well as threatened and endangered* species, *Forests with Exceptional Conservation Value*, *old-growth forests* and ecologically important sites.

ID Team and an extensive involvement of specialists ensure knowledge of conservation planning is incorporated.

Further, the Maryland Forest Service works closely with other agencies and groups on a variety of forest

	Work Plans reviewed provided good examples from the ID Team process from the past 12 months.
4.1.5 <i>Progr</i>	ram to address conservation of known sites with viable occurrences of significant species of concern.
□ N/A	
Audit Notes:	The overall goals of the state forest system include protection and enhancement of biodiversity including G1-G2 species, RTE species, and species of concern. Management plans, AWPs, interviews, and other programs confirm conformance.
	tification and <i>protection</i> of <i>non-forested wetlands</i> , including bogs, fens and marshes, and <i>vernal pools</i> of ecological ficance.
□ N/A	
Audit Notes:	Site visits confirmed that ditches, heads of drains (which are forested), vernal pools and other water bodies are buffered or not included in the timber sale area.
	cipation in <i>programs</i> and demonstration of activities as appropriate to limit the introduction, spread and impact of <i>sive exotic plants and animals</i> that directly threaten or are likely to threaten <i>native</i> plant and animal communities.
□ N/A	
Audit Notes:	Program includes identification and field review, prescription, treatment, and monitoring. During identification the invasive exotic plant and animal are documented in the GIS. Witnessed during review of GIS. Maryland State forests records (Annual Summary of pesticide and other chemical use over approx. last 12 months) document efforts to control populations of invasive plants.
	ider the role of natural disturbances, including the use of prescribed or natural fire where appropriate, and <i>forest</i> th threats in relation to <i>biological diversity</i> when developing forest management plans.
□ N/A	⊠ Conforms
Audit Notes:	Management plans and projects reflect a deep understanding of natural disturbances and their roles in development of ecosystems, communities, and biological diversity and use this understanding in developing strategies and plans. Various agencies and organizations work together to plan and implement a prescribed burning plan. During site visits witnessed and discussed the use of prescribed burning to benefit the ecosystem and forest health.
Performance	Measure 4.2
_	cipants shall protect threatened and endangered species, Forests with Exceptional Conservation Values (FECV) and rests. Indicators:
4.2.1 Progr	ram to protect threatened and endangered species.
□ N/A	☐ Conforms ☐ Exceeds ☐ O.F.I. ☐ Minor NC ☐ Major NC
Audit Notes:	Maryland Forest Service exceeds the requirements for protection of threatened and endangered species.
	Rare, threatened and endangered species are recorded in the heritage database. Heritage biologists are involved in planning, review and approval for each management prescription. RTE species protection and management are included in the Forest Management Plan, AWP Forest Harvest Proposal, and GIS. Monitoring efforts follow each management activity that could affect RTE species or their habitats including monitoring of the effects of restoration treatments.
imperiled and protection ma	ram to locate and protect known sites flora and fauna associated with viable occurrences of critically imperiled species and communities also known as Forests with Exceptional Conservation Value. Plans for my be developed independently or collaboratively, and may include Program Participant management, with other stakeholders, or use of easements, conservation land sales, exchanges, or other conservation
□ N/A	

Audit Notes:	FECVs are generally covered within the broader HCVF approach. For example Delmarva Fox Squirrels are favored in the eastern forest by protection measures that have been built into HCVF zones based on the habitat requirements of this species. Interviewed USF&W employees involved with the habitat improvements for the Delmarva Fox Squirrel. Significant strides have been made in volume and quality of habitat.
• •	ort of and participation in plans or <i>programs</i> for the <i>conservation</i> of <i>old-growth forests</i> in the region of ownership or t tenure.
□ N/A	☐ Conforms ☐ Exceeds ☐ O.F.I. ☐ Minor NC ☐ Major NC
Audit Notes:	Planning system with over-site and stakeholder input facilitates the conservation of old-growth forests. DNR staff confirmed that there have been no harvests or other activities that have significantly affected old growth stands.
Performance	Measure 4.3
4.3.1 Use o	cipants shall manage ecologically important sites in a manner that takes into account their unique qualities. Indicators: of information such as existing natural heritage data or expert advice in identifying or selecting ecologically important for protection.
□ N/A	Conforms Exceeds O.F.I. Minor NC Major NC
Audit Notes:	The Maryland Forest Service implements a robust interdisciplinary approach to identifying and protecting ecologically important sites.
4.3.2 Appro	opriate mapping, cataloging and management of identified ecologically important sites.
□ N/A	\[   \int \text{Conforms}   \]   \[   \int \text{Exceeds}   \]   \[   \int \text{O.F.I.}   \]   \[   \int \text{Minor NC}   \]   \[   \int \text{Major NC}   \]
Audit Notes:	MD DNR's Natural Heritage Program maintains a database of RTE species. Foresters and specialists try to locate special sites and provide information to the Maryland Natural Heritage Program. Witnessed mapping in review of GIS.
Performance	Measure 4.4
_	cipants shall apply knowledge gained through research, science, technology and field experience to manage wildlife ontribute to the conservation of biological diversity. Indicators:
inven progi	ction of information on <i>Forests with Exceptional Conservation Value</i> and other <i>biodiversity</i> -related data through <i>forest atory</i> processes, mapping or participation in external <i>programs</i> , such as NatureServe, state or provincial heritage <i>rams</i> , or other credible systems. Such participation may include providing non-proprietary scientific information, time assistance by staff, or in-kind or direct financial support.
□ N/A	☐ Conforms ☐ Exceeds ☐ O.F.I. ☐ Minor NC ☐ Major NC
Audit Notes:	MD DNR's Natural Heritage Program maintains a database of RT&E species. Foresters and specialists try to locate special sites and provide information to the Maryland Natural Heritage Program. Managers and Natural Heritage staff cooperate through participation on the ID team and as a result sites have been identified and mapped and are managed for a variety of exceptional values. Most sites are included in the HCVF or ESA data layers.
	thodology to incorporate research results and field applications of <i>biodiversity</i> and ecosystem research into ement decisions.
□ N/A	☐ Conforms ☐ Exceeds ☐ O.F.I. ☐ Minor NC ☐ Major NC
Audit Notes:	Maryland DNR's Policy & Procedure Manual and each of the five management plans refer to the process of extensive review by the ID team for each proposed project. These ID teams represent the primary method for ensuring that current scientific knowledge is incorporated into treatments.

# Objective 5 Management of Visual Quality and Recreational Benefits

To manage the visual impact of forest operations and provide recreational opportunities for the public.

## **Objective 7** Efficient Use of Fiber Resources

To minimize waste and ensure the efficient use of fiber resources.

#### Performance Measure 7.1

*Program Participants* shall employ appropriate forest harvesting technology and in-woods manufacturing processes and practices to *minimize* waste and ensure efficient utilization of harvested trees, where consistent with other *SFI Standard objectives*. Indicator:

- 7.1.1 *Program* or monitoring system to ensure efficient utilization, which may include provisions to ensure:
  - a. management of harvest residue (e.g., slash, limbs, tops) considers economic, social and environmental factors (e.g., organic and nutrient value to future forests and the potential of increased fuels build-up) and other utilization needs;
  - b. training or incentives to encourage loggers to enhance utilization;
  - c. exploration of markets for underutilized species and low-grade wood and alternative markets (e.g., bioenergy markets); or

	markets); or									
d.	. periodic inspections and reports noting utilization and product separation.									
□ N/A	Conforms	Exceeds	O.F.I.	Minor NC	Major NC					
Audit Notes:	Not reviewed in 2017 Sur	veillance Audit.								

## Objective 8 Recognize and Respect *Indigenous Peoples'* Rights

To recognize and respect *Indigenous Peoples'* rights and traditional knowledge.

Performance Measure 8.1
Program Participants shall recognize and respect Indigenous Peoples' rights. Indicators

i i obiaiii	Turticipants shall recognize and respect malgenous respics inglies. Indicator.								
	Program Participants will provide a written policy acknowledging a commitment to recognize and respect the rights of Indigenous Peoples.								
□ N/A	Conforms Exceeds O.F.I. Minor NC Major NC								
Audit Not	The policy is stated in each of the five Sustainable Forest Management Plans. Witnessed in Sustainable Forest Management Plan for Chesapeake Forest Lands.								
	"The Department has a commitment to recognize and respect the rights of Indigenous Peoples. It is the mission of The Maryland Commission on Indian Affairs to "promote the awareness and understanding of historical and contemporary American Indian contributions in Maryland." The role of the State Forest management in promoting this state mission is through the following practices:  a. understand and respect traditional forest-related knowledge; b. identify and protect spiritually, historically, or culturally important sites;								

- c. address the use of non-timber forest products of value to American Indians on state forests; and
- d. respond to American Indians' inquiries and concerns received."

#### **Performance Measure 8.2**

*Program Participants* with forest *management responsibilities on public lands* shall confer with affected *Indigenous Peoples* with respect to sustainable forest management practices. Indicator:

- 8.2.1 *Program* that includes communicating with affected *Indigenous Peoples* to enable *Program Participants* to:
  - a. understand and respect traditional forest-related knowledge;
  - b. identify and protect spiritually, historically, or culturally important sites;
  - c. address the use of non-timber forest products of value to Indigenous Peoples in areas where Program Participants have management responsibilities on public lands; and

## Objective 13 Public Land Management Responsibilities

To participate and implement sustainable forest management on *public lands*.

Performance	Measure 13.1
-------------	--------------

Program Participants with forest management responsibilities on public lands shall participate in the development of public land planning and management processes. Indicators:								
13.1.1 Involvement in <i>public land</i> planning and management activities with appropriate governmental entities and the public.								
□ N/A	☐ Conforms ☐ Exceeds ☐ O.F.I. ☐ Minor NC ☐ Major NC							
Audit Notes:	Maryland Forest Service exceeds the requirements for involvement of government entities and the public in public land planning.							
	MFS has a very thorough process for involvement in public land planning. Annual work plan drafts are provided to citizen advisory councils and field visits scheduled to solicit input. After these revisions are made the drafts are made available for review by the general public. The web site and the AWPs contain information on the review process, and the results of the input are summarized in the AWP. Annual Work Plan process is diagramed in the Sustainable Forest Management Plan for Chesapeake Forest Lands, Chapter 11, Figure 17. Annual Work Plan Process.							
	opriate contact with local stakeholders over forest management issues through state, provincial, federal or endent collaboration.							
□ N/A	☐ Conforms ☐ Exceeds ☐ O.F.I. ☐ Minor NC ☐ Major NC							
Audit Notes:	The Maryland Forest Service has implemented an exceptional program for contact with local stakeholders over forest management issues.							
	Stakeholders including community (social), ecological, and economic interests observed the audits and were interviewed. Citizen Advisory Committees are set up for the forests or groups of forests; meeting minutes and agendas were reviewed. Forests maintain "complaints" logs; review indicated that complaints are not regular and are recorded including follow-up actions.							
	AWPs for Maryland's State Forests comprise remarkable compilation of information the management of these forests. AWPs incorporate comments from the advisory boards, the ID Team, and other citizens. The summary of planned vs. actual treatments is an important part of these valuable documents.							
	Interviewed members of the Citizens Advisory Board that attended audit.							

#### Objective 14 Communications and Public Reporting

To increase transparency and to annually report progress on conformance with the SFI Forest Management Standard.

#### Performance Measure 14.1

A *Program Participant* shall provide a summary audit report, prepared by the *certification body*, to *SFI Inc.* after the successful completion of a certification, recertification or surveillance audit to the *SFI 2015-2019 Forest Management Standard*. Indicator:

- 14.1.1 The summary audit report submitted by the *Program Participant* (one copy must be in English), shall include, at a minimum,
  - a. a description of the audit process, objectives and scope;
  - b. a description of substitute indicators, if any, used in the audit and a rationale for each;
  - c. the name of *Program Participant* that was audited, including its *SFI* representative;
  - d. a general description of the *Program Participant's* forestland included in the audit;
  - e. the name of the *certification body* and *lead auditor* (names of the *audit team* members, including *technical experts* may be included at the discretion of the *audit team* and *Program Participant*);
  - f. the dates the audit was conducted and completed;

				,,					
g.	a summary of the findings, including general descriptions of evidence of conformity and any nonconformities and corrective action plans to address them, opportunities for improvement, and exceptional practices; and								
h.	the certificat	tion decision.							
Th	e summary au	dit report will be po	sted on th	e SFI Inc. web	site ( <u>www.sfipro</u> g	ram.o	<mark>rg</mark> ) for public rev	iew.

## **Field Notes**

Complex	Location	Acres	Activity	Note	Audit team notes			
Monday	Monday April 24 - Afternoon Sites							
NA	FME offices	NA	Opening meeting	Introductions, FME update, review audit scope, audit plan, intro/update to FSC and SCS standards and protocols, review of open CARs/OBS, final site selection	Significant progress in updating the forest inventory and modeling was recently completed in the Eastern Region.			
WR25	Tankard	29.0	Reforestation	complete	Natural regeneration of loblolly pine attempted, but did not meet stocking requirements of 300 trees per acre in all areas of the stand. So replanting was conducted			
					on 7 X 10 spacing followed by a herbicide application to release pines. Individual retained legacy hardwood and pines were GPS'd and provided to herbicide applicator. Very little damage to non-target species, as confirmed in application flight lines and application records. Property boundaries on four sides of the timber sale left with a buffer of screen trees that function as legacy trees. Green-up witness in adjacent stands. Applicataors license for Glenn Martin witnessed. Contacts			
WR25	Tankard Tract, Stand 11	26.8	Herbicide Application	8oz Arsenal+2.5 oz Herbimax	contain required elements.			

WR25	WR25 Tankard, S11	33.5	Final Harvest	99% complete	Legacy and seed trees consisting of pond pine and oak GPS'd and marked with blue paint. Roads matted to protect access. Ditches are clean and stream is free flowing. Stand will be left to regenerate and no seed trees are to be removed. No-harvest areas mapped and equipment limited to skid trails. Buffer left along road for aesthetic management. Green-up requirements met by adjacent stands. Future habitat for Delmarva Fox Squirrel (DFS) and Forest Interior Dwelling Species. Lower elevation site, so operations required dryer conditions. Contacts contain required elements.
					Complex of beach dunes with habitat and potential habitat for RTE plants and insects. Observation of habitat management, including deer-exclusion devices. Discussion of habitat and population monitoring and prescribed fire rotation to manage for a mosaic of habitat over time and space. Review of burn plan, prescribed fire safety, training & qualifications. Discussion on collaboration with other government agencies and TNC on
P02	Furnace	447.0	Rx Burn	60% complete	prescribed fire.

P02	Nazareth Church T8, s10&14	14.4	Final Harvest	50% complete	Retention of pond pine and short-leaf pine, all GPS'd. 90 year-old regenerated after agricultural abandonment. Observation of SMZ with harvest exclusion and equipment exclusion buffers. Good distribution and use of slash to cover skid trails. Observation of historic cultural site and protection measures. Temporary bridge will be used to cross creek.
P02	Nazareth Church T4 S1,4,8&10- Honeywell	118.0	1st Thinning	20% complete	Sales from four fiscal years lumped into one to enhance bidding process. Boundaries marked with yellow pain and placards. Observation of SMZ, which was allowed to be thinned to 70 BA (60 BA is allowed). Intended to be future DFS core area. Discussion on use of monitoring results to update management strategy and plans. Manmade ditch buffered. Discussed buffering requirements for manmade ditches. Minor skinning of residual trees. Debris used to stabilize skid trails.
Tuesday	April 25 - Group 1	Sites			
					Review of training,
	FME Offices			Document and record review, and employee interviews	complaints, stakeholder communications, ownership, and lease records.
	Parker Forestry			Document and record review, and employee interviews	Review of contracts, harvest records (including COC for stumpage, lump- sum, and gatewood), post-harvest monitoring, chemical use

W17	R F Richardson, Stand 1	35.8	Natural Regeneration	complete	2015 regeneration survey following clearcut and to check survival of overstory retention (oak and pine); 2,000 trees per acre, but some patchiness to regeneration so site was treated with an aerial spray to reduce broadleaf and herbaceous competition; post-spray regeneration of loblolly was 2,500-3,000 trees per acre, which likely will require a pre-commercial thinning, but no supplemental planting. Discussion on repairing ruts and site preparation options.
W21	Louis Horner Tract Stands 6,11 & 16	62.3	1st Thinning	complete	Objective to enhance FIDS habitat and protect natural temporal stream connected to perennial tidal stream within coastal protection zone. Observation of hardwood riparian forest (protected area) and stream crossing with 16" culvert, currently covered with leaves, but water is still flowing freely. Discussion on culvert sizing, invasive species control and prevention. Observation of historic site, skid trails, property boundaries, and residual stand, all of which are in good condition. Thinned to 90 BA.
W23	Greenhill Complex, Stands 17, 20,23 & 28	205.0	1st Thinning	45% complete	Future DFS core area, no other special features. Thinned to 90 BA. Skid trails covered with slash and evidence that mats were used in sensitive sections of trails. Little to no residual stand damage. Gatewood sale.

	Warrington Tract		1st Thinning	15% complete	Stumpage sale in which operations were stopped by logging crew due to wet conditions.  Observation of hardwood swamp, which was not entered or harvested.  Use of slash on skid trails. Some slash has been piled, but likely will be distributed over the site when operations resume.  Discussion on the effects of age classes and timber quality on potential timber markets.
Tuesday A	April 25 - Group <b>2</b>	Sites			
WR10	Corddry Tract, Stand 12	92.4	1st Thinning	60% complete	Erosion and Sedimentation Plan discussed. No entrance into area. Bridge used for crossing. Bridge has been removed and area stabilized. Density reduced to 70 BA. Tree selection for thinning good.
WR09	Perkins Tract, Stand 3	36.7	Herbicide Application	16oz Arsenal+2oz Escort+2.5oz Herbimax	Shelterwood cut in 2011. Low seed fall and understocked regeneration. Chemical site preparation 8/16. Witnessed and discussed Spill Management and Application Plan. Ditches buffered during spray. Over-spray on adjacent neighbor. Claim discussed and settled with landowner. Seed trees will be removed, soil scarified and planted.
WR11	Shockley	24.7	Afforestation	complete	Afforestation of agriculture field. Witnessed Reforestation Plan. Power line buffered for trees. Hand planting at 7 X 10 spacing. Survival of 485 trees per acre. Boundary lines are

					clearly visible.
WR01	Timmons-Donaway Tract, Stands 3&7	54.6	1st Thinning	complete	Erosion and Sedimentation Plan reviewed and discussed. Tract check for endangered species. Thinning to 70-0 basal area goal. No cut buffer for SMZ. Man-made ditches have been buffered with no entry. Timbers used to cross ditch. Banks are clean and stabilized. Minor skinning of residual stand. Tree selection during thinning improves stand health. No rutting.
Wednes	day April 26 - Grou	p 1 Sites			
D21	Bell Tract, Stand 2	16.4	1st Thinning	complete	Discussed Erosion and Sedimentation Plan. Residual BA is 67. Some rutting in main skid trail noted in monitoring. Witnessed rutting and discussed rutting policy and handling of issue. Good tree selection.
	Huhne Tract Stand				Vernal pools protected with 50' no cut riparian area. Thinning stand to 60 BA. Erosion and Sedimentation Plan developed. Minor rutting. No damage to soil or water. Boundary well defined. SMZ flagged. Good tree selection. Debris used to
D10	1	79.9	1st Thinning	10% complete	stabilize skid trails.

D12	Marshyhope Complex Stands 1,2,8,13&15	138.0	1st Thinning	75% complete	High Conservation Area. Critical Area Plan discussed. Erosion and Sedimentation Plan was developed. Access controlled by gate. Debris used for stabilization of skid trails. Good utilization. No rutting observed. Sale area identified with flagging.
D12	Marshyhope Tract Stands 1 & 49	70.2	1st Thinning	complete	Critical Area Plan discussed. Streams buffered. Erosion and Sedimentation Plan completed. Thinning to 61 BA. Virginia Pine corridors remain to protect residuals and provide wildlife habitat. Debris used to stabilize skid trails. Steam buffer identified with flagging. No entrance in buffer. Buffer has been expanded to compensate for sloping toward stream. Interviewed logger on training, safety meetings and PPE.
D12	Marshyhope	129.0	Rx Burn	complete	Prescribed burn conducted for Natural Heritage Commission. Discussed and witnessed Burn Plan. Benefits include wildlife (Turkeys witnessed on site) and fuel reduction. Interaction with private landowners and citizens discussed. Signs placed on road during burn. Sign with contact information remains after burn (Witnessed on site.)
C03	Messenger Tract	26.4	1st Thinning	complete	Thinning basal area 67. Debris used to stabilize skid trails. Tree selection improves residual stand.

					Prescribed burn conducted for quail at Idyle Wild Management Area. Discussed and witnessed Burn Plan. Burn will be conducted at 2-3 year intervals.
C03	Messenger Branch	67.0	Rx Burn	complete	Benefits include wildlife and rare plants. (Turkeys witnessed on site) and fuel reduction. Plans are to expand burning program and develop a 15 year plan.
	U U			•	, ,
Wednesd	lay April 26 - Grou	n 2 Sitas			
	Powell Tract		Final Harvest	planned, but not harvested	Observation of pre- harvest meeting between forestry and logging contractor. Completion of pre-harvest checklist and map review with logger, discussion of PPE and use of signage near road and trail entrances, use of mats and other BMPs near sensitive areas, location of sensitive resources, etc.
					FIDS, DFS future core and ESAs present. Observation of protections for vernal pools. Thinned to 66 BA, which just below desired BA range (70-90); however, smaller trees meant that desired trees per acre were met. Discussion of opportunities to collaborate with natural
P02	Furnace T126 S3&4	34.0	1st Thinning	complete	heritage staff.

P05	Milburn Lndg T17 S11	4.7	Final Harvest	50% complete	Observation of plantation established in the 1940s with significant hardwood component and large pines. Two ESA types, DFS Future Core, natural stream with SMZ marked with flagging, and recreational trails. Harvest was closed due to wet conditions. All sensitive features were avoided during harvest, including retention trees. Observation of property boundaries, which are noted with yellow paint and/or signage.
P05	Mohr-Milburn Landing T15 S30	35.0	1st Thinning	50% complete	FIDS, perennial stream with 125-150 ft no-cut buffer, DFS Future Core area, thinned to 86 BA, hardwood retention includes yellow poplar and oak. Discussion of stream protections and hardwood utilization, which is limited due to proximity to mills.  Observation of property boundaries.
S27	Wells Tract - Stands 2,5&7	238.9	1st Thinning	complete	DFS Future Core area, and 50-ft buffer established around ditch. Thinned to 73 BA. Logger had to pull out due to wet conditions at one point; no major issues with roads and skid trails observed. Second thinning and final harvest should have opportunities for release and retention of mast-producing species, mainly oaks. Observation of property boundaries.

					Four age classes present, but trees are of similar sizes. Thinned to 75 BA. Observation of stand
					boundaries, which are
					marked with tape.
					Discussion on timber
